Hosting Capacity Stakeholder Webinar
(June 25, 2020)
Engagement Group Ground Rules*

• All stakeholder engagement (Advisory Group and Engagement Group) meetings, webinars and information exchange are designed solely to provide an open forum or means for the expression of various points of view in compliance with antitrust laws.

• Under no circumstances shall stakeholder engagement activities be used as a means for competing companies to reach any understanding, expressed or implied, which tends to restrict competition, or in any way, to impair the ability of participating members to exercise independent business judgment regarding matters affecting competition or regulatory positions.

• Proprietary information shall not be disclosed by any participant during any stakeholder engagement meeting or its subgroups. In addition, no information of a secret or proprietary nature shall be made available to stakeholder engagement members.

• All proprietary information which may nonetheless be publicly disclosed by any participant during any stakeholder engagement meeting or its subgroups shall be deemed to have been disclosed on a non-confidential basis, without any restrictions on use by anyone, except that no valid copyright or patent right shall be deemed to have been waived by such disclosure.

• AG & EG discussions will be open forums without attribution and no public documents by the AG or EG will be produced unless publication is agreed upon by the group.

*Ground Rules adapted from the JU Advisory Group*
Agenda

1. Introductions
2. Additional Map Functionality
3. REST URL Access
4. Consistency Across Third-Party Displays
Additional Map Functionality

- The JU have been working with Scenic Hudson to share hosting capacity displays that can be overlaid with their own public maps, also aligned with the developer guide use case.

- The REST URL approach provides benefits such as:
  - Provides similar level of access to other utilities with REST API access
  - Previously used by O&R with NJ DEP
  - Does not require significant changes from a resources and data access perspective
  - Addresses utility concerns with security, accuracy and downloadability
  - Allows for a potentially significant value add to stakeholders when combined with the downloadable .csv attribute table summary files
The JU are working towards enabling a similar level of access to other utilities with REST API access via a REST URL.

The REST URL would allow stakeholders to overlay hosting capacity data and complete queries and filtering within their own GIS platforms.

Third-parties are being asked to maintain a log of users accessing their portals, that could then be provided to the JU as necessary.
Consistency Across Third-Party Displays

- The JU are aligned on providing a similar level of consistency across utility displays when overlaid into third-party GIS systems.

- Utility disclaimers and language on analysis methodology and assumptions will be provided to third-parties to include in their displays.

- Utility contact info and links to additional reference material will also be included when providing third-party access.
